

Diogenes' Lab Test Flame Ratings

Diogenes Analytical Laboratories and SearchStorage.com teamed together to create disk-to-disk buyer's guidelines that help IT buyers differentiate between products and select the best candidates for their own situation. For this report, we took 13 different products into the lab and ran them through their paces. We compared products based on ease-of-use, manageability, features/functions and technical support systems. Our opinions are based on the experience of more than a decade of implementing and managing data protection systems.

Legend:

🔥🔥🔥🔥🔥 (Five flames): Excellent - We couldn't find anything to complain about.

🔥🔥🔥🔥 (Four flames): Very Good - We were very satisfied, but the product either lacked some "nice to haves" or experienced minor glitches.

🔥🔥🔥 (Three flames): Satisfactory - It works OK, but is not a distinguishing feature.

🔥🔥 (Two flames): Fair - Lags most competitors in the category.

🔥 (One flame): Poor - We wouldn't spend our money on it.

How Diogenes Shortlist Candidates were chosen: Shortlist candidates are products that we believe offer high caliber functionality and capabilities to meet the needs of most IT organizations. Other products may be considered as "best of breed" for specific applications and situations in which they excel.
